Leviton Canada Achieves another Year of Carbon Neutrality

Leviton Canada's head office and distribution center in Pointe-Claire, Québec maintained its carbon neutrality certification throughout 2023

POINTE-CLAIRE, QC, September 9, 2024 – Leviton Canada, a leading provider of electrical solutions, proudly reaffirms its commitment to sustainability by achieving carbon neutrality once again in 2023. We have significantly reduced our environmental footprint by 32% compared to 2022, with a substantial impact on transportation.

Despite having energy-efficient lighting and relying on hydropower—a clean and renewable energy source—for our facility, transportation (both upstream and downstream) remains the primary contributor to our carbon footprint. In late 2022, we introduced the new order consolidation process designed to combine customer orders and optimize shipping schedules, resulting in reduced packaging waste and fewer individual trips, ultimately cutting down on emissions of polluting gases.

In 2023, Leviton Canada successfully reduced outbound mileage by an impressive 52% through the order consolidation process. This reduction corresponds to over 25 million miles (over 40 million kilometers) equivalent to 4,342 tCO₂e saved. Despite the significant reduction in kilometers traveled, the number of units shipped remained within 5% of the units shipped in 2022, emphasizing the success of the order consolidation process.

Furthermore, as Canada ranks as the fourth-largest hydro power producer globally, with over 60% of its electricity generated from hydro sources, Leviton Canada aims to promote similar opportunities worldwide. With that in mind, Leviton Canada invested in the Nalcas Hydro Power Project in Chile, which comprises small run-of-river hydroelectric plants. This investment not only contributes to our carbon neutrality but also creates local jobs and enhances Chile's trade balance.

Through all our efforts, we were able to realize a 1,190 tonne CO₂e reduction from our 2021 baseline to 2023.

“Sustainability isn't just a moral obligation; it's a strategic imperative. At Leviton Canada, we're dedicated to embedding sustainable practices across our operations, ensuring a prosperous future for our business and the planet,” stated Jason Prevost, President and Chief Operating Officer of Leviton Canada. “Our committed employees have driven us toward carbon neutrality, exemplifying our collective commitment to a greener, more sustainable future.”

In addition, Leviton has released its second Sustainability Report highlighting progress through fiscal year 2023 toward the company's global goal of achieving Carbon Neutrality by 2030 (CN2030). Developed in 2022, the CN2030 program is comprised of five action categories in which the company is poised to make the greatest impact across all business units: Carbon and Energy Reduction, Innovation, Reducing Jobsite Waste, Maximizing Recycling, and Water Stewardship.

About Leviton

Every day, Leviton is engineering possibilities that make the future happen, meeting the needs of today's residential, commercial, and industrial customers globally. From electrical, to lighting, to data networks, and energy management, Leviton develops thoughtful solutions that help make its customers' lives easier, safer, more efficient and more productive. Driven by its commitment to its customers, the ingenuity of its employees and the safety and quality of its products and solutions, with Leviton, the FUTURE IS ON.
