

THE A-B-C'S ON WHY YOU SHOULD CHOOSE MOOG FACTORY REPAIR SERVICES

Summary

When you use Moog Factory Repair services, you can rest assured that your equipment is operating at peak efficiency. Available only through Moog Authorized Distributors, there are many reasons why so many professionals rely on Moog Factory Repair for their equipment. Here are the A-B-Cs of the key reasons to choose Moog for your next repair service:

A Authentic Moog Replacement Parts

Independent repair houses do not have access to authentic Moog parts when servicing or repairing components. **What are the implications of this for your business?** You may think you're receiving a product back that has been refurbished to 100% of original operating performance, but in reality it may be much, much less. Often, an independent repair house will use inferior quality replacement parts, or they may reuse semi-worn components taken from other devices built to different specifications.

A Moog Factory Repair is your only way to ensure that your equipment is brought back to original operating capacity and efficiency. As a bonus, newer part upgrades and technology advancements will be included in the repair at no additional cost to you.

B Best Warranty Coverage is Included

When choosing a Moog Factory Repair, you will get the same warranty coverage as you would with a new purchase. **How can Moog offer this?** Because all refurbished products are brought back to like-new condition using our 8-step repair process. Compared to repairs performed by an independent provider, a Moog Factory Repair offers much greater long-term value and peace of mind. As an added benefit, Moog can also implement your specific tuning parameters upon request. Why would you trust anyone but the experts when it comes to your repair and service needs?

C Certifications are Maintained

Are you using intrinsically safe or explosion proof Moog components in your equipment? Moog product with safety certifications will include special designations by licensing agencies such as ATEX, IECEx, FM, CIIT, CSA, KOSHA, ITRI, PESO, CCC and TIIS. When it's time for service or repair, only a Genuine Moog Factory Repair will retain those certifications while returning your product back to the original specifications. Repairs performed by independent facilities that are not trained, certified, and approved by these licensing agencies will void safety certifications.

Why is this vitally important to your business? Many times, your insurance policy will specify the need for these certifications to remain in compliance. If your machine malfunctions and has a decertified component installed, it may void equipment warranty coverage as well.

Don't be left with a questionable repair that may fail unexpectedly or leave you questioning safety capabilities. Benefit from the full performance, reliability, and expertise that only comes with an authentic Moog Factory Repair.
